Compact on stainless steel frame modul completely piped and wired.
All fittings and installations in your prepared brewhouse show room are included.

Custom-made brewery plants at fixed prices

We plan, construct and put in operation custom-made micro-breweries with a yearly capacity from 500 – 5.000 hl for the production of all kind of beer types according to individual requirements. The brewery equipment will be delivered and assembled as complete unit including all essential components up to filling of the beer in bottles or kegs. Our scope of delivery contains not only micro-breweries but also industrial breweries. You can find further information under industrial breweries.

Experience from practice

In contrary to mere plant manufacturers only involved in planning and manufacturing brewery plants, we can refer to a well-founded practical experience in operating micro-breweries all around the globe and also based on the daily business in our own Wennigser-pub breweries here in Germany. We are pleased to provide this know-how with no restrictions to our customers as future brewery operators.

Know-how

Beer brewing at highest quality level requires the application of perfect technical production facilities, the use of natural raw materials as well as approved recipes in the hands of an experienced brewer. Referring to this, we lay the foundations for a successful operation. Already in the run-up to decision-finding, we consult our customers in terms of choice of location, calculation of profitability and recommendations of personnel to the best of our knowledge reverting to our vast experience gained in our own micro-breweries.

Our brewery plants are of modular construction and based on latest construction and production methods in conjunction with traditional workmanship. Strict intern and extern quality controls of the system units during the entire manufacturing process guarantee a trouble-free operation for many years. After termination of assembly, **our brewmasters assume responsibility for briefing and training your technical personal on site** and convey the required brew-specific knowledge.

Following the initial operation of the brewery plant, we remain at your disposal further supplying support during everyday-operation, staff problems or training matters. On request, we offer special brewing training courses in our own Wennigser-pub-breweries here in Germany for our customers from abroad.

Perfect and user friendly brewing is our target the process has many selectable settings. The recipes of the beers are individually selected and approved via the control process of the brewing. The automatic cleaning System is highly effective, easy and fast.
